

## **900 Micron ( $\mu\text{m}$ ) MTP® Connector**

MTP® connectors are used extensively in a variety of fanout configurations in data center and telecom applications. US Conec's new 900 micron ( $\mu\text{m}$ ) connector components compactly and elegantly manage the 900 micron tubing as it exits the connector. The new connector components can terminate directly to tight buffered fiber for the most rugged possible assembly. In addition, the MTP® 900 micron solution can terminate to ribbon furcated into the connector hardware which has been pre-assembled with 900 micron loose tubing.
