New MTP® Shuttered Adapter Protects Against Dust

US Conec Ltd. announces the immediate availability of the new MTP Shuttered Adapter. The panel mounted adapter used to mate MTP connectors offers superior dust protection that far exceeds current products on the market.

The MTP Shuttered Adapter has a spring loaded shutter door that is easy to operate and provides protection from airborne particulates greatly reducing the time required for installation, testing and troubleshooting. A unique O-ring seal design keeps out signal degrading debris from the optics under the most extreme conditions. The adapters were placed in a sealed chamber and subjected to $\frac{1}{2}$ cup (0.12 liter) of ISO Arizona Road Dust that circulated for 10 minutes while blown by a fan per the requirements of GR-326 with no contamination permeating the O-ring seal. The new adapter design also passed typical tests for thermal aging, vibration, impact and durability.

Post-test examination with no cleaning

US Conec Ltd. headquartered in Hickory, North Carolina, manufactures single mode and multimode MT style and contract multifiber ferrules, the MTP connector family, Concours® optical flexible circuits and fan outs, contract precision molded parts for optical packaging, and novel dry cloth connector cleaning products.
