**Multimode MT Elite®: New, highest precision, 12 fiber, thermoplastic, multimode MT ferrules ensures lowest available insertion loss interconnect solutions for high speed multimode links.**

US Conec Ltd. announces the immediate availability of multimode MT Elite® ferrules. Following in the steps of the industry hailed single-mode MT Elite ferrules, comes the highest precision multimode MT style ferrule on the market. This leading-edge multimode MT ferrule provides a cost effective solution for managing the most stringent link attenuation budgets while allowing for the maximum number of potential connector pairs in the link. Multimode MT Elite® ferrules combined with US Conec's MTP® brand MPO connector components are ideal for use in array trunk cabling, breakout cassettes, and for existing and emerging high speed parallel optic protocols.

Tested in accordance with proposed industry standard encircled flux launch conditions, US Conec's multimode MT Elite® ferrules offer a worst case mated pair insertion loss of 0.35dB on 50/125 OM3 fiber @ 850nm with a typical distribution mode of 0.10dB.

US Conec Ltd. manufactures singlemode and multimode MT style and contract multifiber ferrules, the MTP Brand MPO connector family, Concours® optical flexible circuits and fan outs, contract precision molded parts for optical packaging, and sells OptiPop and IBC™ brand dry cloth connector cleaning products.

For additional information on US Conec's MT Elite® Multimode PPS MT ferrules, please go to [www.usconec.com](http://www.usconec.com)
