New Cleaning Tool for ODC-Series and Other Outdoor 1.25mm Fiber Optic Connectors

US Conec Ltd. announces the immediate release of the IBC™ Brand Cleaner ODC. This mechanical cleaning tool uses a dry cleaning strand to remove dust and liquid residue off the end face of plug and socket ODC-series connectors. This version of the IBC cleaning tools features a new, highly flexible cleaning tip and a ribbed alignment cap. These features, combined with a reinforced nozzle, make the IBC Brand Cleaner ODC tool ideal for cleaning connectors deployed outdoors. The tool uses a simple pushing motion for engagement and provides an audible click to alert the technician when the tool has been fully engaged. The tool locks at the end of life preventing accidental cross contamination. The IBC tool's cleaning strand is precisely guided across the cleaning tip ensuring consistent contact with the center of the ferrule while not scratching the end face. This feature of the IBC tool eliminates the need to re-install the cleaning strand across the cleaning tip as is the case with many competing mechanical cleaners. The IBC Brand Cleaner ODC reduces cleaning costs to less than \$0.25 per cleaning which is significantly less than most other available solutions. IBC Brand Cleaners provide improved reliability, better cleaning performance, faster cleaning times and lower cleaning costs than current methods such as sticks and swabs. For more information, please contact US Conec at customerservice@usconec.com or call 828.323.8883.

US Conec Ltd. manufactures singlemode and multimode MT style and contract multi fiber ferrules, the MTP® Brand MPO connector family, Contours® optical flexible circuits and fan outs, contract precision molded parts for optical packaging and sells the OPTIPOP, NEOCLEAN and IBC™ Brand dry cloth connector cleaning products.
