Improved, smaller ribbonizing tool for MT termination

US Conec Ltd. is pleased to announce the immediate availability of an improved ribbonization tool. Use of the tool reduces time to reliably terminate round fiber cable in connector styles with MT ferrules.

This precision machined tool is designed specifically for MT-ferrule and other array termination and is suitable for both factory and field use. The new tool is smaller, less expensive, and easier to use than similar products on the market today. Additionally, the process uses commonly available tape as opposed to UV or heat curable liquid adhesives. A free training DVD is provided with each purchase.

US Conec, headquartered in Hickory, NC, manufactures single-mode and multimode MT-style and contract multi-fiber ferrules, the MTP[®] connector family, Concours[®] optical flexible circuits and fan-outs, contract precision molded parts for optical packaging, termination equipment for multi-fiber interconnections, and novel dry-cloth connector cleaning products.
