New MTP connector kit designed for round cable

US Conec Ltd. is pleased to announce the immediate availability of a new MTP[®] connector line of components that are compatible with round, stranded cable styles.

Using the new MTP (MPO-style) connector with round cable has many benefits when compared to rectangular ribbon cable terminations while not sacrificing the extremely high density provided by such technology. Benefits include eliminating preferential bends, better aramid yarn distribution during assembly, easier routing during long cable length installation, and generally lower cable cost. The new connector design has been fully qualified for multimode and single-mode applications according to standard industry requirements.

US Conec, headquartered in Hickory, NC, manufactures single-mode and multimode MT-style and contract multi-fiber ferrules, the MTP[®] connector family, Concour[®] optical flexible circuits and fan-outs, contract precision molded parts for optical packaging, termination equipment for multi-fiber interconnections, and novel dry-cloth connector cleaning products.
