Next Generation of IBC™ Brand Cleaner for Single Fiber Connections

US Conec announces the immediate availability of the next generation of IBC™ Brand Cleaners dry cloth cleaners for mated and unmated connectors. These dry cloth cleaners are designed for single fiber connectors residing in the bulkhead adapter or loose on a cable assembly. The cleaners are made to clean both ultra (UPC) and angled polished (APC) ferrules. The IBC Brand Cleaner SC is a universal 2.5mm cleaner effective at removing contaminants from SC, FC and ST connectors. The IBC Brand Cleaner LC is a universal 1.25mm cleaner that is effective at removing contaminants from LC, LC secure keyed and MU connectors. The IBC Brand Cleaners are disposable and give up to 500 plus cleanings per unit and clean a surface area of 800µm. Unlike traditional swab cleaners that rely on a technique of the user, the IBC Brand Cleaners are easy to use and provide consistent cleaning every time.

The simplex IBC Brand Cleaners are molded with an antistatic material and use a specially woven cleaning fiber that carefully lift and remove harmful contaminants without damaging the ferrule's end face. The cleaner is engaged by using a simple pushing motion. The user will hear a "pop" sound during the engagement process which indicates that the cleaning process is complete. US Conec's IBC Brand Cleaners are effective at removing skin oil, vegetable oil, Arizona Road Dust, saltwater residue, distilled water residue, 70% isopropyl alcohol residue, graphite pre-mate, graphite post-mate, dryer lint and simethicone. Both versions of the cleaners have an extension feature that increases the cleaner's reach to 208mm for hard to reach connectors.

Additional information including data sheets, drawings and demonstration videos on US Conec's IBC Brand Cleaner family can be found at www.usconec.com under the cleaner section. Please make inquires at customerservice@usconec.com or call US Conec Customer Service at (800)769-0944 or (828) 323-8883 to locate a stocking distributor.
